ARKANSAS DEPARTMENT OF EDUCATION
HIGH RELIABILITY SCHOOL SURVEY

As announced earlier this month, the Arkansas Department of Education is excited to begin the implementation of Dr. Robert Marzano's High Reliability Schools (HRS) framework. A key component of this process is the collection of perceptual data, as described in *A Handbook for High Reliability Schools.* To facilitate this step, Marzano Research has allowed the ADE to distribute the Level 1 survey electronically to schools across the state. The ADE is also working with Hanover Research to analyze the results and return a report for each participating school by March 27th.

Here are some key points if you would like to take part in the survey:
- Survey links will be live from February 5th through February 19th
- The ADE is providing a digital distribution of the Level 1 HRS survey and analysis. Surveys for all 5 HRS levels are available within *A Handbook for High Reliability Schools*, and schools are welcome to use either format.
- School leaders can find a step sheet with survey links by logging in to the Arkansas Digital Locker (https://adelocker.arkansas.gov), which uses the APSCN/Active Directory username and password.

For additional information on the High Reliability Schools framework:
- Visit http://www.arkansased.gov/divisions/special-projects/high-reliability-schools-hrs-in-arkansas
- Take part in Twitter chats: #HRS4AR
- Read through *Leading a High Reliability School* and *A Handbook for High Reliability Schools.*
